

**For reliability with a clean bill of health
at the hospital.**
Time is life.

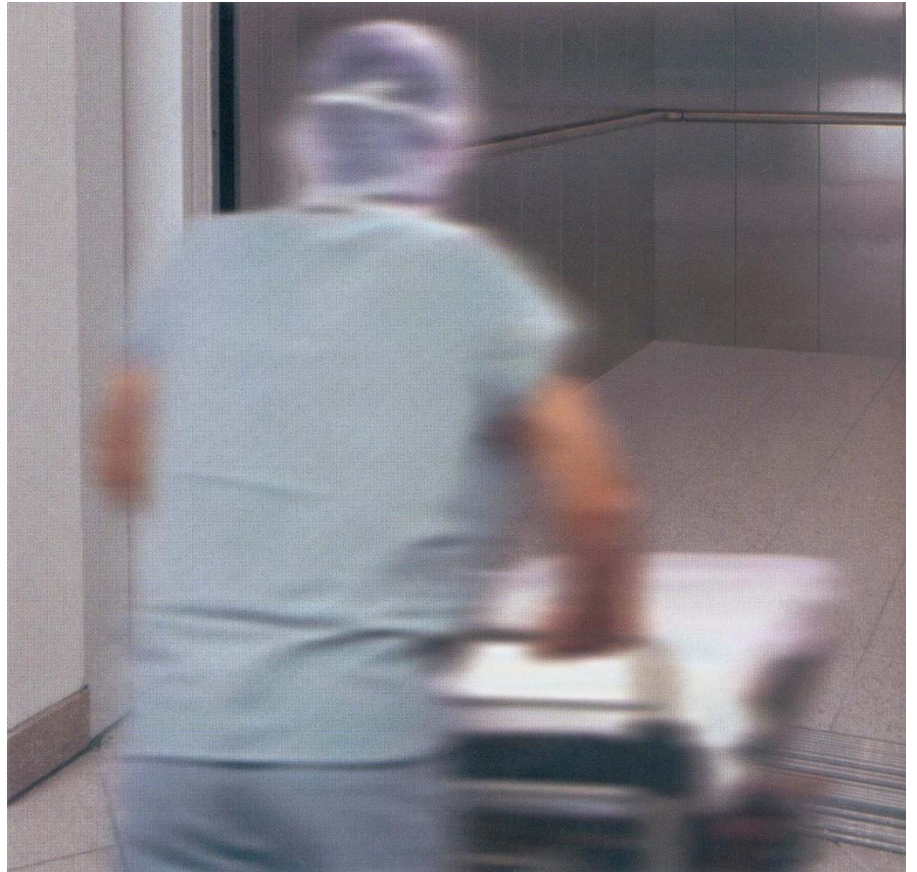

ThyssenKrupp

Safe in any direction.
We accommodate high loads for bed and passenger elevators at hospitals with perfect safety technology.

This also includes our new emergency brake system that even prevents the so-called "fall to the top".

Modernization while practicing.
Lengthy impacts are extremely minimal within the scope of our modernization, even with machines from other manufacturers.

A question of technology, quality and experience.

up to date

The elevator as the logistic heart.

Enormous potentials are released when it goes "under the knife".

The central role of the elevator installation for logistics, process safety, and appearance at the hospital

Get well soon!

ThyssenKrupp elevators are used at numerous hospitals both nationally and abroad. They optimize patient-oriented operation. Coping with visitor flows, and improving overall prestige. Patient transport in hospital elevators has a special needs status in these applications. First of all, this refers to the availability of the system. This becomes especially clear with emergencies where no time must be lost.

Availability and Time. Probably the most important fields in daily around the clock hospital operations. Develop progressive potentials in both areas with ThyssenKrupp: Through high quality assurance of availability and the opportunity to gain time.

Solutions for new efficiency

The innovative call management, ThyssenKrupp destination selection control DSC, not only records the call location through a central operating terminal, but also the destination, thus optimizing internal transport trips. Based on such information, each trip will be assigned the closest elevator with in the group, giving significant gain of time and an increase of handling capacity of up to 60%.

In addition to future-oriented performance, the ThyssenKrupp control and drive technology put further necessary quality standards for modern hospital elevators on the map. Above all, this includes absolute operational dependability in addition to gentle start up, acceleration, and braking, and the cars are exactly levelled with the landings. Uninterrupted door monitoring provides safe and unhindered entering and leaving of the elevators.

Quality from a single source, especially for you.

ThyssenKrupp is considered one of the leading companies worldwide in comprehensive self-development and manufacturing of elevator installations and elevator components. All areas of application are covered. Controls, drives, doors, car equipment, safety technology, and service. We build your modernization package customized for your specific needs.

Find out now about important perspectives for your elevator installation. Give us a call and set up an appointment for a personal consultation.

Targeted transport.

The ThyssenKrupp destination selection control DSC controls elevator groups for bed transports with new efficiency.
